	RECOMMENDED USE AND RESTRICTIONS ON USE: Manufacturing & Industry for non-structural components predominantly to conduct electrical current.				irrent.	
		SECTION 2 – HAZARD IDENTIFIC	ATION			
CLASSIFICATION: sc		Copper and copper alloys are considered on "article" and not hazardous in its olid from. However, certain processes such as cutting, milling, grinding, melting nd welding could result in some hazardous materials being emitted.				
OTHER INFORMATION:		Fumes from hot processes may contain other compounds with different exposure limits. Dust or fumes generated by machining, grinding, welding or thermal cutting of the copper may produce airborne contaminants. Consult Sections 3 & 8 for further information.

	SECTION 4 – FIRST AID MEASURES					
EYE CONTACT:	Eye injuries from solid particles should receive immediate medical attention. Dust may be flushed from eyes immediately with large amounts of water, lifting the lower and upper lids occasionally; seek medical attention.					
SKIN CONTACT:	Cuts or abrasions should be treated promptly with thorough cleansing of the affected area. Wash the skin using soap or mild detergent and water. Get medical attention if irritation develops and persists.					
INGESTION:	If the product or dust is swallowed, seek immediate medical attention or advice. Do not induce vomiting.					
INHALATION:	If breathing has stopped, perform artificial respiration and obtain medical aid immediately. If breathing is difficult, provide fresh air and seek medical attention as soon as possible.

SECTION 11 – TOXICOLOGICAL INFORMATION					
POTENTIAL HEALTH EFFECTS: Symptoms related to the physical, chemical and toxicological characteristics					
Under normal handling and u	use, exposure to product presents few healt	h hazards. Dusts may cause mechanical			
irritations to eyes and skin. Ingestion may cause transient irritation of throat, stomach and gastrointestinal tract.					
Inhalation may cause coughing, nose and throat irritation, and sneezing. Higher dust exposures may cause difficulty					
breathing, congestion, and chest tightness.					
EYE CONTACT:	If present as dust, copper may cause irritation, discoloration, and damage. As a foreign				
	body in the lens, copper dust may cause a dense cataract and discolor the lens.				
SKIN:					
	Ingestion of significant amounts of welding electrodes is unlikely. If copper is				
INGESTION:	swallowed and person is conscious, give large quantities of water to drink. Get medical				
	attention as soon as possible. Serious effects may occur if large amounts of dust are				
swallowed.					
	Breathing metal dust may worsen symptoms of individuals with pre-existing chronic				
INHALATION:	respiratory disease. Follow exposure guidelines for copper dust and fume. Acute				
	exposure to dust or fume may cause upper respiratory tract irritation, metallic taste in				
	mouth, nausea, fatigue, and/or metal fume fever. Breathing copper dust may worsen				
symptoms of individuals with pre-existing chronic respiratory disease.
